

Accessing Internet from the iPad at Home

Step 1

Go to settings and connect to your home WIFI network.

Step 2

Locate and open the Home Access app on your iPad. It should automatically be on your iPad without having to download it from Self Service. If you are asked to login to Google hit ignore or skip.

Step 3

In Home Access, login using your WVEIS number (for most students it is their 390#) as the username and password.

- The internet should now work on your iPad at home.
- If it does not, please let your HomeBase teacher know and they will write a work order for it. Be aware that as the county deploys student iPads, it is taking time for the county techs to get to each school to work through the issues. Please be patient!

Each time you connect to a **new** WIFI the steps above must be followed.
